

Measures for Justice Launches Groundbreaking Data Portal that Brings New Transparency to Local Criminal Justice Systems in Wisconsin

ROCHESTER, NY – May 23, 2017 – Measures for Justice (MFJ) released a Data Portal that tracks how criminal cases are being handled at the county level from arrest to post-conviction. The Data Portal includes all 72 counties in Wisconsin.

The Data Portal increases the transparency of Wisconsin's local justice systems by collecting and analyzing criminal justice data and presenting them at the county level.

"In five minutes, I was able to find more data about my county's performance than I have in ten years on the job," said Winnebago County D.A., Christian Gossett. "I was able to identify specific areas of disparity and have since created solutions, studies or workgroups to answer questions about why these disparities exist and how we can change them."

The Portal allows users to review and compare performance data within and across states, and to break them down by race/ethnicity; sex; indigent status; age; offense type; offense severity; and attorney type.

"The data are a treasure trove for communities and system administrators who will now have access to reliable, informative, and comprehensive data about their criminal justice systems," said Amy Bach, President and Executive Director, Measures for Justice. "Our Portal is intended to be a reference point for conversations about how to address the multiple issues facing the criminal justice system."

Depending on the county where the case was processed, findings in Wisconsin include:

- defendants accused of nonviolent misdemeanors entered a pretrial diversion program between 0% and 26% of the time;
- defendants accused of felonies pleaded guilty without an attorney between 0% and 42% of the time;
- defendants convicted of misdemeanor drug possession were sentenced to jail between 3% and 37% of the time.

The Data Portal comprises data that has been passed through a set of performance measures developed by some of the country's most renowned criminologists and scholars. The measures address three primary objectives of criminal justice systems: Public Safety; Fair Process; Fiscal Responsibility.

The Portal also includes data from Pennsylvania, Florida, Washington, Utah, and North Carolina. Additionally, the Chan Zuckerberg Initiative is joining other funders to help support Measures for Justice's goal of measuring 20 states by 2020.

MFJ has worked to develop the tool since its founding in 2011. The Laura and John Arnold Foundation, Google.org, Pershing Square Foundation, the MacArthur Foundation's Safety and Justice Challenge, the Open Society Foundations, and the Draper Richards Kaplan Foundation provide funding and support, in addition to the Chan Zuckerberg Initiative.
